

## Marden iDEA 1125 Fully Automatic Loading-Unloading System

The Marden **iDEA 1125** is the latest generation of Fully Automatic Loaders, following up from the Marden 1200. This model features two floor rails rather than one, with a drive gear on the front rail. It eliminates the overhead drive-rail in the 1200 model, and offers increased stability and greater agility.

TMB Baking first installed the 1125 in 2015 at Essential Baking Company in Seattle, with a version that loads from the side and off-loads to overhead conveyors. In 2016, we installed the same model at Grand Central Baking Company in a configuration that offloads to low table for manual sorting and handling onto cooling racks.

TMB Baking stocks the critical operating parts for Marden loaders, ensuring maximum up-time and fast turn-arounds when maintenance or repair is required. We have now been working with these fully automatic loaders for over 10 years with sound performance.

Let TMB Baking help your bakery to scale to fully automatic loading and unloading of multiple ovens and you work to meet your customers' demands of artisan baked breads.

## Marden iDEA 1125 Fully Automatic Loading-Unloading System

### Specifications:

- Oven depths of 2.8M (110") or greater
- Oven door or chamber widths of 1125mm (44.8") or greater
- Fully-automatic load, deck selection, deposit and unload
- Dough pick-up alongside of oven or at rear of loader
- Bread deposit from rear of loader overhead or at dump table level
- Fully programmable PLC-driven loader with Touch screen operation
- Remote programming and diagnosis available
