FARIBO OFFERS THE QUALITY ADVANTAGE

FARIBO'S ROTOCAST PROCESS ASSURES STRENGTH AND DURABILITY

High Density Polyethylene (HDPE) Rotocast Components are heavy duty, versatile and will withstand steam cleaning and freezer temperatures with no chipping, cracking or rusting. Components are smooth cornered, thick walled, seamless construction for easy cleaning and long life. Choose from a variety of colors to create your own systems, or to meet Color Code Compliance Requirements.

SEPARATE FRAME ASSEMBLIES NOW FINISHED IN NSF CERTIFIED POWDER COATING

Faribo Mobile Ingredient Bins feature Frame and Caster Assemblies separate from the ingredient bins. This unique feature of independent frames has for over 20 years enabled operators to replace individual components as needed avoiding the wasteful discarding of an entire assembly because of a broken caster. This system also safeguards against possible health code citations caused by contaminant build-up on caster housings.

Faribo Mobile Ingredient Bin Frames are made of welded tubular steel and are designed to provide dependable long lasting service. Frames are coated with a smooth, NSF certified electrostatically applied, baked-on powder finish.

**USDA
APPROVED**

THE IMPORTANT CERTIFICATIONS YOUR CUSTOMERS DEMAND

Faribo's Foodservice & Bakery Equipment has been tested and Certified by **NSF International**, the most widely recognized and respected independent certification organization for the public health and safety.

Faribo's Foodservice & Bakery Equipment also carries **USDA** Approval rating.

AVAILABILITY OF REPLACEMENT COMPONENTS SAVES THE OPERATOR MONEY

Faribo's entire product line is available not only in complete assemblies but also by individual components-covers, bins, frames-even casters. As components are lost or damaged, individual replacements can be ordered thereby salvaging entire assemblies for future use. In the long run, an investment in Faribo equipment is an investment that saves the operator money.
